

## Contents of Your ELF GPIO PK1 Kit

P/N	Description	Quantity
ELFGPIO-1B	ELF GPIO PC Board, Revision 1C	1
AT89C2051	Microprocessor (Programmed for U1 - PS/2 Keyboard decoder)	1
22V10	GAL22V10 (Programmed for U5 - Bus Interface)	1
16V8	GAL16V8 (Programmed for U6 - Speaker Controller)	1
1185-24G	Elf 2000 Stacking Bus Connector	1

### **IMPORTANT!**

You may return any kit for a full refund, less the shipping charges, **provided that it is unopened and unused**. Unless defective, parts and kits **cannot be returned once construction is started**. Look it over carefully and be sure it's what you want *before* you start soldering.

If any part we ship you is defective, we'll replace it provided that you return it with in 90 days of purchase. This doesn't cover parts that are damaged by your mistake, so if you put that IC in backwards and blow it up, please don't send it back to us! All the expensive and hard to get ICs such as CPUs, memories, PLDs, EPROMs, etc. are 100% tested by Spare Time Gizmos before they are shipped, and we know those are OK when they leave our door. If one of the other parts doesn't work and you don't think it's your fault, then we'll take your word for it and replace it for you.

We're sorry, but our warranty does not extend to parts that are damaged by improper construction techniques, especially poor soldering, or ICs damaged by static electricity.

***Please join the Yahoo! Spare Time Gizmos group for Elf 2000 support, and to see announcements of future COSMAC Elf 2000 peripherals!***
